1. General Product Information

1.1 What is Autodesk Factory Design Suite 2013?

Autodesk® Factory Design Suite is built specifically for the layout design of machine lines and manufacturing facilities before equipment is installed and commissioned on the factory floor. It includes design, analysis, and presentation software to help you discover and communicate the most efficient layout solution by creating a digital model of your factory. It enhances AutoCAD and Autodesk® Inventor® software with exclusive access to interoperable product workflows and factory-specific content that help improve design efficiency, accuracy, and communication when responding to changing business requirements.

1.2 What are the benefits of Autodesk Factory Design Suite?

Autodesk Factory Design Suite can help machine and equipment builders, engineering service providers, and manufacturers to better design, optimize, and visualize layouts of machine lines and manufacturing facilities in order to:

- **Win more business**—Help decision makers visualize layout proposals in 3D instead of 2D drawings that can be difficult to interpret.
- **Meet compressed project schedules**—Move from 2D conceptual layout, to factory model, to creating a 3D virtual fly-through in less time than traditional 2D layout methods.
- **Optimize the factory layout process**—A layout solution with interoperable workflows built specifically to help you to transform facility layout liabilities into profit-generating assets and take advantage of modern laser scanning workflows.
- **Collaborate more effectively with suppliers and partners**—Reduce installation risks by analyzing the digital factory model for clashes and space constraints digitally, before they become problems on-site.
