

# Reduce information security risks of remote collaboration

Protecting proprietary content and sensitive data among distributed teams is mission-critical

As more information is being shared across distributed teams, organizations need secure collaboration tools that enhance worker productivity and satisfaction. Security was built into our design. See why millions of people trust us with what matters most.

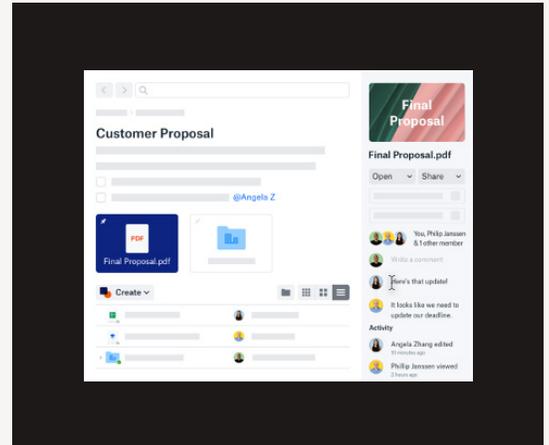

Dropbox helps us speed up remote working by allowing our employees to collaborate internally—and with clients and contributors—from anywhere. And, perhaps most importantly, it allows us to wrap visibility and security controls around this collaboration.

Nick Smith, IT & Digital Operations Director, 1000heads

# Use Dropbox to protect your organization's data assets by facilitating remote collaboration experiences employees will enjoy.

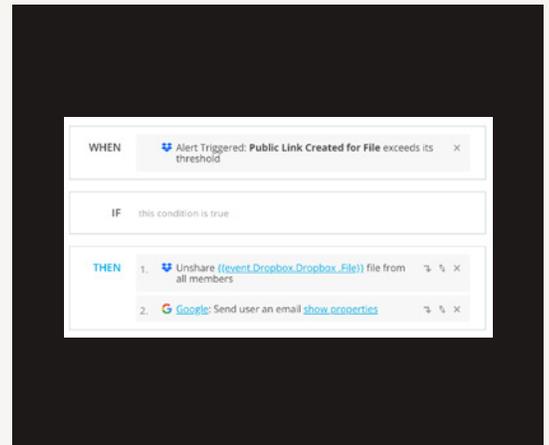

## Secure collaboration across distributed teams

Remote collaboration will continue to increase, and that's a good thing. With Dropbox's intuitive sharing controls such as expiration dates, passwords, and external sharing restrictions, managing content among distributed teams is a breeze. And by migrating your teams to enterprise accounts you can minimize exposure of your data and protect the work of authorized devices across mobile, desktop, or web.

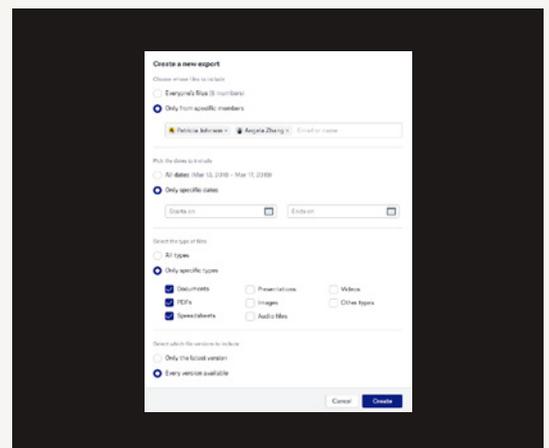

## Protect sensitive content critical to regulatory compliance

Global and regional data handling guidelines continue to inform how organizations gather, store, and protect personal data. Dropbox allows you to scan for sensitive content across managed and unmanaged accounts, and to create granular automation policies and comprehensive activity reports to ensure protection. It also alerts you to misconfigurations and suspicious activity, making it easier to maintain compliance.

## Empower employees to do their best work

Employee experience is everything. A satisfied, engaged workforce is essential to achieving your strategic outcomes. With a secure collaboration solution that brings colleagues and workplace apps together in one organized space, you can unlock the full potential of distributed teams. Dropbox offers complete control over employee access, so that you can make content accessible to the right person at the right time.

# Protect organizational data with a people-first approach to remote collaboration

Dropbox solutions strengthen security and compliance with experiences employees enjoy  
Choose the best distributed workspace solution for your organization:

## Dropbox Advanced

Extend security posture with advanced controls

- Strong password with high entropy
- Multi-factor Authentication (MFA)
- Malicious File Protection
- Team Folder configuration
- Granular sharing permissions
- Regional data-at-rest storage (UK, EU, JP, DE, US)
- Business Continuity with Dropbox Backup & Dropbox Rewind
- API access for security platform partners

## Dropbox Enterprise

Intelligent security and data classification for distributed teams

- Security Alerts
- Security Alerts Dashboard
- Malicious File Insight
- Bruteforce Alerts & Protection
- Data Classification Scans
- Extend External Sharing Reports
- Enterprise Mobility Management (EMM)
- Unmanaged User Insight
- Advanced training for end users and admins
- 24/7 live technical assistance
- *Includes features from Standard and Advanced*

Dropbox makes our security and compliance audits a breeze. Our clients know their sensitive information is safe whatever happens because they—and we—trust Dropbox to secure it.

Dan Keegan, Head of Digital Operations, Transmission
